SUMMARY

Digital content creator with 3+ years of IT experience. I run a YouTube channel producing guides and video essays with an emphasis on engaging editing and visually compelling gameplay. Combining a strong background in computer science with a deep understanding of game mechanics, I quickly learn new tools and use audience feedback and performance data to improve my content.

EXPERIENCE

Digital Content Creator

Jan 2025 - cur

Self-employed

Capturing and editing gameplay footage, incorporating VFX/SFX, graphics and hand-drawn animations to create polished gaming content. Ensuring content accessibility by producing, timing and styling subtitles. Monitoring player discussions and community trends to deliver timely content. Automating repetitive tasks by writing scripts in Python.

- Achieved **15000+** views on multiple YouTube videos
- Gained **1100** subscribers in one year
- Increased average click-through rate from **2.6%** to **7.7%** over the course of one year
- **60%** of viewers were still watching the video past the 30 second mark

★ Noticing that some characters have an easier time handling certain gameplay situations, I've turned this observation into a video focusing on the subtle differences in their abilities. Diving into numbers and dissecting unusual gameplay moments helped the video to stand out. It reached 5000 views within its first week and has generated 76 new subscribers to date, converting 1.2% of its total lifetime viewers into subscribers which is 2x the average among my top 10 performing videos.

Software Engineer

May 2022 - Feb 2023

TravelLine

Developing and maintaining features for a large-scale live service product. Writing clean code and ensuring its robustness through unit testing. Expanding public-facing APIs.

- Developed a long-awaited feature for internal use that reduced support waiting times to one day
- Communicated with an overseas client to integrate their product into the system

★ While working on a new feature, I encountered a complicated database column that was becoming a recurring obstacle to future development. To handle it once and for all, I upgraded my SQL knowledge and wrote the most complex query my team has seen - and when deployed on the production server, it still worked.

Software Engineer

Feb 2021 - May 2022

Across Systems GmbH

Working within a small team on a translator's desktop software and single-page application. Delivering new features consistently within a Scrum framework while maintaining CI/CD practices. Writing unit tests with NUnit/Boost.Test and functional tests with Postman.

- Implemented a caching algorithm that reduced the duration of one of the key processes by 30% on average
- Independently developed a 404 view that maintained app's signature app design and offered helpful suggestions

Software Engineer

Oct 2019 - Jan 2021

Forward

Building software for driving and heavy equipment simulators. Developing new features, reproducing, investigating and fixing issues. Creating responsive UIs that mimic real-life systems.

- Found an underlying reason for a bug that had already resisted several attempts by other developers to resolve it
- Proactively reviewed the technical specification and initiated changes with a goal to deliver a more polished final product

★ When working on a project that would represent the company at the national technical fair, I was assigned a ticket reporting a lack of NPC behaviour in a newly added situation. Realizing from the get-go that the fix might be deemed too complicated, I decided to investigate whether the existing algorithm could accommodate the new feature before escalating the issue. Keeping it to as few lines of code as possible, I was able to defend my solution to the team lead. Seeing the little NPC cars finally find their paths through a complex intersection felt like being a fairy godmother.

EDUCATION

Master's degree, Applied Mathematics 2017 - 2019

Novosibirsk State Technical University (NSTU)

Bachelor's degree, Applied Mathematics 2013 - 2017

Novosibirsk State Technical University (NSTU)
